This service is valuable to me, So I don't know why (other than monetary reasons) anyone would be opposed to my being able to listen to weather and traffic via Satellite Radio. The NBA should welcome this service and should not be able to control what I hear on a service I pay for. This is no different that saying MSNBC should not be able to give the weather nation-wide, or that the WEATHER CHANNEL cannot give the weather in my local area, because they are a cable concern. Its just information, but information that I consider IMPORTANT. Thank you for allowing the public to comment.
